QUANTUM PHYSICS JOINS METAPHYSICS: NEPTUNE MOVES FROM AQUARIUS TO PISCES

By Judi Thomases

“We are trapped in the illusion of matter...Human beings are evolving through [various planes of existence from the lowest upwards, until the density decreases] with the ultimate aim of becoming purely spiritual beings” – According to Mme. Helena Blavatsky, The Secret Doctrine (1888), as quoted in The Out-of-Body Experience: The History and Science of Astral Travel, by Anthony Peake (Watkins)

During the past century, from Einstein onwards, science has gained new understanding regarding the nature of matter and reality. This new knowledge has brought us ever closer to age-old metaphysical truths. Science, in astrology, is in the province of the sign of Aquarius while spirit is in the province of the sign of Pisces, the ruling planets of which, of course, are Uranus and Neptune, respectively. These outer planets play their role in human evolution, and have participated in a series of interesting dance steps during this last century, with major configurations such as long sextiles, mutual receptions, and transits through their own rulings signs, making them even more significant. A powerful drama is unfolding.

This article will look at these momentous planetary movements as part of a cosmic plan, and decipher their meaning in the context of the development of the new human – a creature that Blavatsky tells us (as do other sages who have journeyed within) is becoming ever more aligned with the spiritual being it aims to become. So we will look at the role of Neptune in human affairs in its recent past dance steps to find, if possible, what it is teaching us, where it is leading us, and what the big pattern talks to us about.

To do this, let's see how the counterintuitive and befuddling discoveries in the field of quantum physics have impacted science (i.e., humanity's rational mind) in bringing reason and hard fact ever closer to the metaphysical theorems which have always proposed that everything is just maya (illusion) and that we are one spirit playing a game of duality while inhabiting a world of form that seems to our five senses solid and real.

Often, it is noticed that reality behaves strangely, and seems to break its own hard rules, such as with the entire phenomena of psychic and paranormal abilities, and with reports indicating that consciousness can leave the body through astral travel or near-death yet still somehow be

there. Furthermore, science seems at a loss to explain the availability of all past knowledge shown by gifted people such as Edgar Cayce during his trance readings. These tantalizing clues lead to questions regarding the very nature of reality, and seem to lead directly to Neptune's realm. Science has begun to investigate these mysteries in order to unravel their peculiarities. Several books have been written by scientists in recent years that tackle the odd happenings from a scientific view.¹ Most importantly are the findings from the field of physics, especially the physics of the very, very small. The quest, then, is for the comprehension of the minutest bits of matter that can be found and described, measured, located, and fathomed in order to discover how matter is created from nothing.

Amazingly, these mathematical and scientific efforts have led our greatest thinkers directly to Neptune's territory. They have begun to apply science to Neptune's mystical and elusive behavior, discovering in doing so that science is beginning to sound a lot like ancient philosophy.

The prime goal in this article is to present Uranus, Pluto, and especially Neptune, as instruments of cosmic design, as forces that influence the spiritual evolution of humans, allowing us to gradually divest ourselves of density and come ever closer to pure conscious awareness. Therefore, it will be fun to pull together the planetary meanings with the path that science has taken, and to look primarily at Neptune's important purpose in human development at this critical time.

For over a century, research has worked out theories, mathematics, and experimental proofs that point ever more to a fusion, or merging, of Eastern philosophy, ancient metaphysics, and current scientific findings. As the world continued to tackle mundane problems regarding wars, politics and economics, a strange thing was happening: in scientific breakthroughs, "reality" was starting to look fluid and ephemeral. On the macrocosmic scale (astrophysics) and microcosmic (quantum physics), solidity and predictability were losing ground to odd concepts gleaned through new discoveries.

Astrologers know that we have entered an era when the planet of illusion – Neptune – has entered its own sign, Pisces, the sign of spirituality, mysticism, and permeable boundaries. Let's tie together a lot of seemingly loose ends that are really all one picture. Neptune has a lot to teach us. It plays an important part in human affairs, and it behooves us to comprehend it as clearly and consciously as possible. Neptune's role in history, in our psyche, and of course most importantly, the meaning of Neptune in Pisces regarding the entrée into the Age of Aquarius and humanity's new quest to evolve into a new more spiritual human, is vital to grasp.

The Astrology

Neptune's long sextile to Pluto from 1943 all the way through 2000 provided an emergent background for spiritual transformation even as our nation and the world went through several horrible wars. During this time, Pluto's eccentric path took it within Neptune's orbit, thus making Neptune the outermost (ergo, most influential) planet in the solar system. Neptune kept a trine to Uranus through 1947, ending WWII and the Holocaust with a profoundly changed view of errant belief systems, at least in Western Civilization. Afterwards, Neptune struggled with a square to Uranus in the Fifties, bringing a period of tension between crystallized customs versus liberating experimentation that questioned entrenched values. This was epitomized by the Bohemian "Beat Generation" of Jack Kerouac. I came of age in New York City's jazz clubs and folk music dens of Greenwich Village during this period.

In the Sixties, Neptune in Scorpio made a sextile to the rare Uranus-Pluto conjunction in Virgo. In particular, the "Summer of Love" in 1967 provided some incredible idealism and conscious awakening that was in sharp contrast to the Vietnam War. Many people feel that the Sixties were the beginning of the breakdown of traditional family values – think *Mad Men* – and certainly "sex, drugs and rock 'n roll" played a large role in those shifting mores and changing consciousness, as represented by a swing in values away from rigid custom and traditional forms within the family, within entertainment, and within the formal and conservative structures of our government and society. Whether this was to your liking or not, it changed some things very fundamentally, and so it has to be seen as part of a big cosmic pattern, a dynamic that continues to further human evolution.

Meanwhile, the advent of the PC and the internet played their roles in disseminating knowledge and connecting global mind. (The Uranus/Pluto-in-Virgo generation had, as their mission, the building and marketing of this worldwide web of information exchange – of course, *what else could there be in a new air sign great age, the Age of Aquarius?!* They have succeeded admirably.)

As I've talked about in prior articles, America's role as the platform/arena/venue for the evolution of the New Human is of utmost importance. In the Seventies, Neptune in Sagittarius, still in sextile to Pluto, squared the U.S. Neptune in Virgo, and opposed the U.S. Mars in Gemini, forming a t-square between these two planets. This led to an oil crisis, a gas shortage, and a very remarkable perception for modern Americans that we have a weakness and vulnerability; that, on the world stage, we have an Achilles heel. This drawback continues as a challenging dilemma to this day, with the Mideast pulling our strings

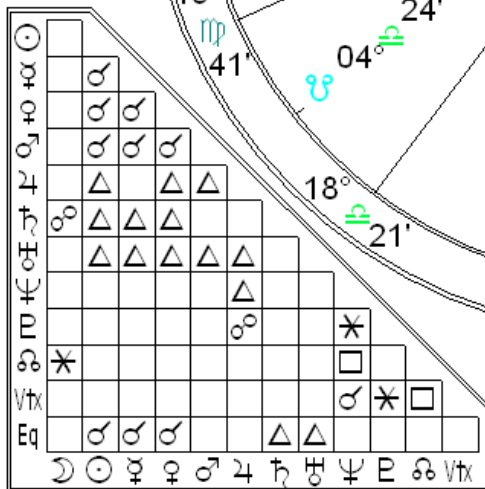

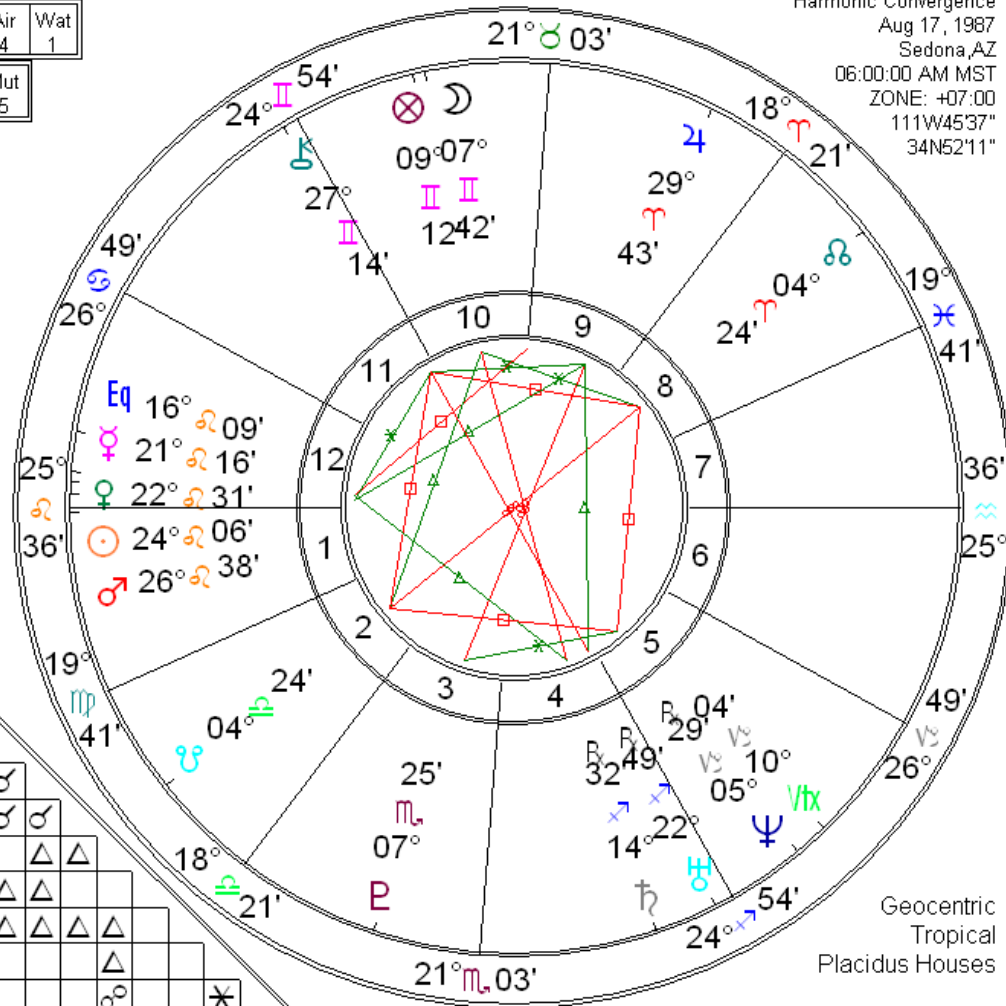

when it comes to energy availability, and many political hot potatoes, such as drilling, green energy, and other factors tied into America's energy dependency. This entire situation has revealed our military weaknesses as well. Neptune has a great deal to do with vulnerability, confusion, and anxiety. Not coincidentally, it is a fact that only by dissolving the small ego-structure can the higher nature be accessed. Did America need a humbling moment?

Against this backdrop of wars, worries and weaknesses, Neptune continued its subtle work of advancing the progress of humanity's spiritualization. On August 17, 1987, tied into the beginning of the countdown (i.e., the last 26 years) of the Maya calendar, **the first globally synchronized meditation** was held to symbolize the effort to unite mankind and move from being warlike to becoming peaceful. I remember standing in a street in a small town in New Jersey, holding hands with everyone in the neighborhood as far as the eye could see. It was called The Harmonic Convergence².

Notice Wheel

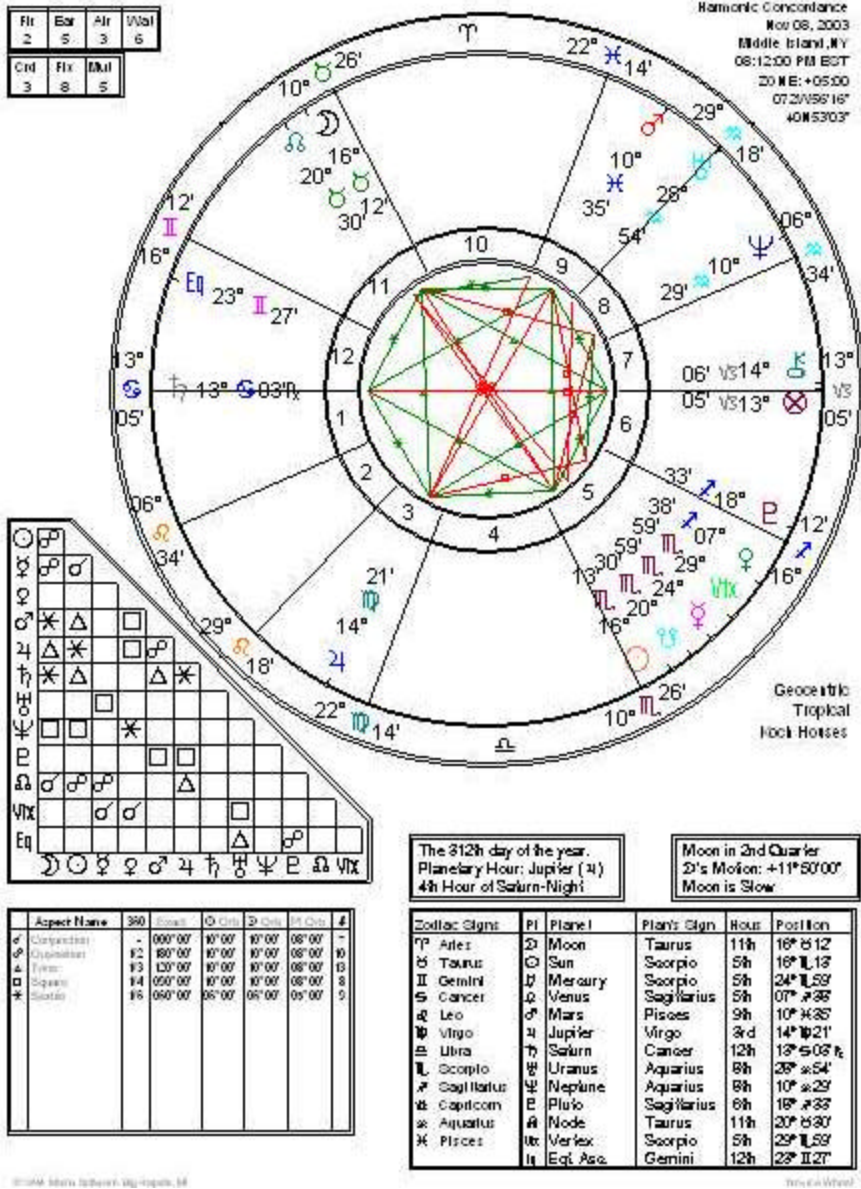

Holding tightly to its embrace of Pluto, by 1988 Neptune welcomed Saturn and Uranus into its clinch. Between 1988-1993, the Moon's

North Node joined Neptune and his buddies, Uranus and Saturn, in the same sign: Capricorn. Once again, Neptune and Uranus were in a strong relationship, and he now grouped his influential friends around him. This momentous alignment was called **The Capricorn Climax**, and signaled a fresh dance that was obviously designed to affect the very nature of reality, Capricorn being the most perfected of the realistic earth signs. In April 1992, Neptune and Uranus both stationed retrograde at 18° Capricorn within a day of each other, sextile Mars in Pisces and Pluto in Scorpio. It's easy to see that something big was afoot!³ Spirituality, intuition, and deep transformative change were being cultivated in our gardens of physical and non-physical reality.

"The last geocosmic 'Climax' was between 1988-1993, when the Moon's North Node, Saturn, Uranus and Neptune all formed successive conjunctions to one another in the sign of Capricorn, hence the term 'Capricorn Climax.'... That is remarkable, because each of these bodies has an orbit of greater than 18 years... The 'Cardinal Climax' during the 2008-2010 period can be expected to correlate with a major shift in collective consciousness." - Ray Merriman, StarIQ.com

By the Nineties, a new energy pattern took over, knitting together science and mysticism. First, Uranus entered Aquarius by May 1995, remaining there until March 2003, at which point it entered Pisces. Then Neptune entered Aquarius in January 1998, and resided there until February 2012 (just prior to the writing of this article). Then from March 2003, **Neptune formed a mutual reception with Uranus** that would last eight years. By October 2003, Pluto at 18° Sag formed a sextile to the midpoint of Uranus at 28° Aquarius and Neptune at 10° Aquarius. This shows an emphasis on the scientific sign of Aquarius in a beneficial aspect for transformation during the first decade after the Millennium (the "Oughts"), with both the ruler of mysticism and the ruler of science connected to each other as the globe tried another worldwide meditative unity event called The Harmonic Concordance in early November 2003.

HARMONIC CONCORDANCE (11/8/2003, 8:12 PM EST, MIDDLE ISLAND, NY) - a perfect astrological shape, considered a "portal" by some.

In 2004, during a fertile period when Uranus had just re-entered Pisces, and on the day that the Sun was conjunct Neptune (February 4, 2004), Facebook was founded by Mark Zuckerberg (born 5/14/84). This techie innovation undoubtedly furthered the mission of the Uranus-Pluto generation to create global mind. Facebook is very important because it allows individuals around the world to connect and share their lives whether their posts are profound or mundane. It has gone through its own internal metamorphosis, technologically and as to what it is reflecting. When it began, it was for college kids to stay in touch; at that point, it was a very youthful venue, and it didn't have the aspiration to become a billion dollar world-wide enterprise that it has since become. However, business people soon recognized its value, and began to co-opt this forum. So it has turned into a marketing device, an advertising

platform, and a sharing of people's lives in a way that's both very personal and yet very detached. Very friendly. In other words, very Aquarian. Facebook is the realization of global mind talking to itself and hanging out with its many scattered brethren, while Google and Wikipedia signify the acquisition of all human knowledge and the accessibility of it to anyone anywhere on the planet. So Facebook (as had many earlier key inventions that defined their eras) was *destined* rather than accidental – in this age, sooner or later, someone would have figured out the technology and the usage of it.

Of course, the same thing might be said of Steve Jobs (2/24/55) and his lifelong task – from the introduction of the earliest Apple computers (1980, publically traded) to iTunes, iPods and iPads (2008-2009) – the task being to ground many inventive possibilities into profitable and wildly popular tools that would define the new age. The iPhone, virtually a small personal device enabling technology to link the planet in a grid, came into being under this pattern. Or of Bill Gates (10/28/55), whose pioneering company Microsoft came of age in the late '70s to mid '80s. Or of Google (founded 1998) and Wikipedia (begun 2003), or of any number of groundbreaking tech breakthroughs (email, blogs, YouTube, etc.) during this recent era that offer portable devices to access all of mankind's knowledge and connect all minds to it and each other. These small personal devices, along with the invention of cellular and wireless technology, are actually little computers – little portals – that you carry around with you; thus, the logical rational brain has built itself the means to talk to anybody, to look up anything, to be in touch wherever you are, to spread the concept of human communications worldwide, globally. This is quite a feat!

The astrological pattern that is just completing – the long passage of Neptune, ruler of Pisces, from January 1998, having finished its fourteen-year transit of Aquarius, the ruler of technology, invention, and innovative science – ended February 3, 2012. Even though the Facebook social experience may be ersatz, Neptune has done its task of bringing fluidity to this technological connectivity. There have been other ways that cyberspace has been used more and more during this transit to further humanitarian campaigns, connect disparate people, champion charitable causes, and in other ways serve the planet from a heartfelt, if not always a clear and fully enlightened, perspective.

Meanwhile, Uranus finished its sixteen-year transit of Pisces on March 12, 2011 (begun April 2, 1995), thus completing its higher calling of birthing the New Human, a more illuminated and empathic creature who could combine technology and vision, and start the process of ushering in a beautiful world – in cyberspace if not yet in physical reality.⁴ During the period when Uranus and Neptune were in mutual reception, science

became interested in the intangible, the odd, and the alternative realities made known by quantum physics, while the mystical experience sought to align itself with scientific inquiry. Virtual computer gaming was devised during this era too, introducing *avatars* (virtual selves) and *game worlds* (individually-created universes) into the lexicon. Holography was popularized as well. These latter two became of key importance in tackling the bewildering concepts inherent in quantum physics.

But Neptune, during the latter leg of its Aquarian journey, also affected the United States in a most powerful and detrimental way: by Spring 2009, the nation's Aquarian Moon (27° Aquarius in the Sibley chart) began to feel the effects of Neptune's transit by way of a confused glimpse of Aquarian Age ideals. Hopeful for change but hampered by weakness, America's ninth house Neptune reflected vulnerability via foreign oil energy dependency and perplexing legislative muddles. This pattern was completed by the last conjunction to US Moon in November 2011.

This also marked the time when the U.S. Mars, planet of war, in secondary progression went retrograde (in July 2006) in the peace-loving sign of Libra in the powerful tenth house of the U.S. Although the nation continued to engage in further wars (Persian Gulf War, Operation Desert Storm, war in Afghanistan), America was losing its taste for the battlefield. Having entered Libra by progression in 1940, and reached the nation's Midheaven by 1942, Mars at that time was providing the maximum involvement in hostilities yet experienced. It was a terrible era! Mars began slowing its progress by 2003, and came full stop by July 2006, after which it will retrograde (move backwards in the horoscope) until 2086 – eighty years! The Martian influence – so prominent in the angular seventh house of the U.S. natal chart – will gradually become subdued. We won't stay weak... no spiritual master can be so... but we will find ways to channel aggression into a Libran concept: diplomacy! We will learn how to *“beat [our] swords into plowshares and [our] spears into pruning hooks. Nation will not take up sword against nation, nor will they train for war anymore.”* — [Isaiah 2:4](#) & [Micah 4:3](#)

Was Neptune revealing a purpose through confusion, questioning, vulnerability, weakness – a purpose in yearning for guidance, returning to a desire for connection to the divine, not necessarily through organized religion but through personal effort? Could this be the greater reason behind this reaction? When the ego of a person or a nation is developed and strong, feeling impermeable, the ego-structure isn't flexible or open to profound searching because it is content in its role, but when the ego-structure is weakened, undermined, no longer impervious, a different experience can be had, a turning to a higher power, a willingness to acknowledge defenselessness. This is often a precursor, a great leap in

spiritual development leading to a new awakening. This may be where we find ourselves now.

Commencing in 2008, another major once-in-a-lifetime celestial pattern formed: **the great Cardinal Climax**. It will last until 2015, and involves Saturn in Libra, Pluto in Capricorn, then Uranus in Aries, and finally Jupiter in Cancer. As with all such formations in any one quadriplicity, there are squares and oppositions between planets (in this case, outer planets), and thus tension and challenge. Cardinal signs demand action and change. This Cardinal Climax strongly affects the United States, as we are a cardinal (Cancerian) nation, and we are already experiencing the punishing strain of this configuration. 2008 was also the advent of the Obama administration, which has turned out to be a non-stop battleground. Other nations are also having their crises – e.g., overwhelming debt, nuclear threats, natural disasters, wars and uprisings, etc. We are living *in interesting times*. From the viewpoint of spiritual evolution, however, this momentous celestial pattern provides the backdrop, indeed the catalyst, for the overwhelming changes that are needed to move us toward enlightenment and shift.

We're now under a new pattern in which Neptune has entered its own sign, Pisces, the sign it rules. What can we expect from now to January 2026? Will it henceforth flood us with even more oceanic connectivity and compassion? Can we bring this cyber-paradise down to earth even as we struggle with great challenges? Can we see a spiritual evolutionary perspective applied to world events?

During the first half of 2012, Mars, retrograding, traveled three times over the nation's Neptune at 22° Virgo (which also happens to be Obama's Mars), surely an activator of matters having to do with government, employment, laws, beliefs and values, antagonism, and confusion. Neptune then stations direct at 0° Pisces *only five days* after the next presidential election, proving itself once again to be a major player in America's destiny, and thus in world events, and consequently in the arc of humanity's spiritual development. What happens to America, internally within the country, and beyond the country in relationship to the rest of the world, is very meaningful to the evolution of human spirituality. It is as though America is the lead player in a global drama, the actor or entity around which many plot devices circle, and whose fate for good or bad determines that of contemporary times. So, I will be talking about what happens to America and Americans, but not from merely a xenophobic point of view, but because as America goes, so goes the world.

We can see that when America's economy is weak, even though other countries may be experiencing fortunate patterns, the general tone in the

world is depressed or distressed. And when America is strong, boom times and golden ages prevail. There is no question in my mind that America serves as the platform upon which the new human will evolve. With that said, we see a key figure on the world stage in the form of the American president, Barack Obama, who is a very Neptunian person with a Sun and Mercury in a t-square to Neptune and Jupiter. We see a strange situation upon his election into office, when Neptune transited America's late Aquarian Moon. And we see a tenure during which the nation feels confused, polarized and vulnerable... no doubt all part of a fated mix serving a grand cosmic plan. For readers who have followed my writings, it's no surprise that I tend to see all things as *meant*.

A particularly interesting pattern occurred between March - June 2011: Neptune reached 0° Pisces (the degree of our nation's progressed Descendant!) roughly at the same time that Uranus and Mars reached 0° Aries, and Jupiter reached 0° Taurus. Certainly a new beginning, it harkens of mysticism, pioneering brilliance and earthly prosperity! Maybe global mind will now seek to link up with the esoteric (non-physical, alternate reality) realms that are between worlds, or beyond the physical. And that's where Neptune in Pisces will pierce.

It would seem that for the next fourteen years, the evolution of humanity into less dense states will move forward at full force. A shift is in the air! Neptune has done a lot of prior preparation for this. It will again be supportive of the U.S. chart rather than debilitating as it moves into the initial trine to all the U.S. water planets. Once again, it will re-enter that lovely sextile dance with its buddy Pluto, who will continue to provide the challenging catalyst for the transformation via its opposition, while its friend, the unpredictable and temperamental Uranus, in semi-sextile to Neptune but square to the nation's Cancerian planets, will increase the disrupting challenge on the world stage as well as in the American household, thus adding dynamic tension to the unfolding drama. At the same time, their friend, conservative Saturn, has progressed himself into a very obliging grand water trine in mysterious Scorpio, to transiting Neptune and to the U.S. Venus, and will helpfully come into a transiting alignment to this entire array by the significant date of late 2012, roughly around the next presidential election. Simultaneously (end of 2012), **Saturn and Pluto will form a fresh and different mutual reception** in the signs of Scorpio and Capricorn, stabilizing transformation and (Saturn being a co-ruler of science) allowing a new understanding of the properties of matter and the nature of reality to be gradually and formally instilled.

Therefore, 2013, the midpoint of The Cardinal Climax, will kick off with the two things that evolution needs: stressful challenge, and protective support. For America, the year 2013 brings the beneficence of Jupiter

into America's Cancerian home, greatly enhancing the blessings from Neptune and Saturn's trines. It's a grand pattern that sets up the possibility for a new type of human to be prodded into existence with an array that offers a base of operations which will allow this transformation (in fact, insist upon it) to take place.

Neptune's Role and Qualities in Human Affairs:

Before we segue from astrology to science in pondering the significance of Neptune's foray into its ruling sign, let's consider the planet's traditional symbolism. In astrology, what does Neptune denote? What does it rule over? What is its role in human affairs? Here are some effects:

- CLOUDING / SUBDUING LOGIC - Neptune diminishes the control of the rational mind, casting a veil over reason while emphasizing imagination, dreams, and fantasies;
- LOWERING DEFENSES SO THAT FLOW IS ALLOWED - Neptune weakens the solidity of three-dimensional form, dissolves the little ego-structure of personal separated identity, and forces one to question consensus reality;
- ENHANCING EXTRASENSORY PERCEPTION (PSI, ESP) - Neptune opens the gate to the paranormal, or alternate, realities of dreams, astral journeys, shamanistic experiences, and other avenues of non-physical information; it opens the Third Eye;
- PROVIDING CONNECTION TO THE HIGHER SELF (THE AKASHA) - Neptune affords an intangible link to one's deepest source, or spiritual awareness; it paves the Rainbow Bridge (conduit) to The Source of All (God)
- HIGHER CONSCIOUSNESS - Neptune moves us from duality to oceanic perception;
- BELIEVING IN HIGHER GUARDIANS - Neptune mediates between our lower and higher selves, and introduces angels, elders, and guides by allowing the mind to expand beyond formal strictures and into the realm of possibility;
- (Negative) ANXIETY, GULLIBILITY, MISPLACED TRUST, WEAK ENERGY - Neptune scares us with the unknown, trips us up through foolish hope, excessive idealism or grandiosity, and depresses us with weakened resolve, lack of ambition, and low vitality;
- ESCAPING LIFE'S PAIN; TRANSCENDING PHYSICAL BONDS; RETURNING TO SPIRIT - Neptune provides two avenues of solution to life's dilemmas: escapism (through substances or mental fog) or transcendence (through raised and expanded mindset)

What does it govern?

- | | | |
|-----------------------------|-----------------|---------------------------|
| • Oceans, seas | • Art, color | • Psychoactive chemicals, |
| • Channeling | • Music | neurotransmitters |
| • Film, photography, movies | • Wine, spirits | |

- Oil, gasoline, petroleum
- Visions, inspiration
- Glamour, spells
- ESP, paranormal
- Non-rationality
- Spirituality, mysticism
- Dreams, astral journeys
- Inner guides, angels, totems
- Fairy tales, magical kingdoms, utopia
- Myths
- Vapors
- Drugs, medication
- Ghosts
- Fog, gases
- Confusion, doubt, anxiety
- Vertigo, synesthesia
- Meditation
- Permeability
- Oneness, non-duality
- Transcendence
- Light

Having noted the explosion of communications technology knitting together all knowledge and all individual minds from the Nineties through the Oughts, what can we expect in terms of mystical concepts permeating hard and fast reality in this next powerful pattern?

The Science

Let's get an overview of what science has been up to during this period, especially the concepts reached in quantum physics. (Disclaimer: I'm not a scientist, and heaven knows, certainly not a quantum physicist! But two things give me some *cred* in writing about this heavy subject – I've been reading about cutting-edge science for decades, and in 2005-2007 I received material from my spirit guides in the form of a new book⁵, now in editing stage, that presents many of the scientific concepts, but from a metaphysical perspective, *prior to my having read much* about the mind-boggling *science* now being discovered. This dual perspective has been the very inspiration for this article: **science and metaphysics joining under the perfect astrological arrangement.**)

There are amazing correspondences between the hard science of quantum physics, and Neptune traveling through Pisces in this era, especially in view of how the outer planets have done their task and primed our minds and our technological advances. It's exciting to ponder what we know of Neptune and Pisces from an astrological point of view when entwined with the newest science. Neptune's passage through Pisces can represent **a radical change in the perception of reality.**

I'm indebted to one book in particular, [The Out-of-Body-Experience: The History and Science of Astral Travel](#), by Anthony Peake (Watkins, 2011), for its plain-talk explanations of many impenetrable concepts now being bandied about by the scientific community or accepted there as indisputable fact. I'll present a little history, and then tackle each pertinent discovery or theory as to its Neptunian reference – not, of course, that which science has yet agreed to, but which we as metaphysicians can attest to.

Some Basics of Quantum Weirdness

The story begins way back in the period between 1839-1897, with pioneering discoveries about light and electromagnetism. It was then that the first subatomic particle (the electron) was identified. Based on Michael Faraday's observation that electricity and magnetism were linked by something called the electromagnetic field, in 1873, proof was shown that this field was "not simply local but universal"; it existed everywhere. [Neptunian concept: OCEAN OF ONENESS] "This was a revolutionary insight. Suddenly space was not empty but contained a field that contained particles, whether they were in contact or not."⁶

Between 1901-05, Albert Einstein, formulating the theory of relativity, and German physicist Max Planck, both studying visible light and other radiation to identify and measure light, perceived an anomaly - that light acted not only as a wave, but as little packets... which Planck named "quanta" (Latin for "package"). This produced a physics conflict because "light behaved as a continuous wave but also as a particle (photon) containing a precise amount of energy based upon its frequency". **"Light", therefore, "had properties of DUALITY"**⁷, according to a paper published by Einstein in 1909. [Astrological configurations: In 1901, Uranus and Pluto were opposite, from Gemini to Sag; by 1905, Uranus and Neptune were opposite, from Capricorn to Cancer.]

In pursuing this enigma, by 1924 it was determined that all matter in the universe has two aspects: as a wave and as a particle. The great question was: when the wave exists as potential and probability and spreads infinitely, what makes any bit of it decide to change from being a wave to being a particle? What makes it collapse into a physical particle? The answer, very counterintuitive and startling, is that **"the act of observation makes a non-physical wave turn into a solid object"**⁸. [Neptunian concept: I AM THAT I AM; THOUGHT CREATES REALITY]

By 1926, a theory was proposed that "nothing exists until it is observed"; that "every particle has the 'probability' of being in one location or another." The particle, in effect, "is 'smeared out' across all possible locations", but once it is observed, "the particle is forced to make a decision as to where it should locate itself". That is called COLLAPSING THE WAVE FUNCTION. Theories developed from this concept suggest that "reality is created by an act of observation. In other words, "there is a wave function containing all the possible locations that is collapsed into a point location when it is observed or measured... Without an observer, there is no reality, just a void containing waves of probability waiting to be collapsed by a conscious mind." [Neptunian concept: MIND IS THE BUILDER; VISUALIZATION] If this is the case, then "each of us is

creating our own version of reality as we look around.” Both consensus reality and dream reality “are pulled into existence by an act of observation.”⁹

The whole understanding of conscious observation collapsing the wave of probabilities (the wave function) “changed forever our understanding of the nature of reality. Nothing exists until it is observed. Every particle has the probability of being in one location or another.”¹⁰ “One version of quantum theory suggests that the act of observation can have a direct effect upon the behavior of subatomic particles.”¹¹ [*Neptunian concept CONSCIOUS CHOICE BUILDING REALITY VIA THOUGHTS; “THE SECRET”; THE ART OF MANIFESTATION*] This gave rise to a very important new concept: “a startling fact about how our confidence in the solidity and reality of the perceived universe as presented by our senses is an illusion.”¹² [*Neptunian concept PERMEABILITY; DISSOLVING BOUNDARIES*]

In a famous thought-experiment in 1926 called Schrödinger’s cat, a paradox was considered in which the cat in a box could be alive or dead based on alternate realities before the wave function of probability was collapsed.¹³ [*Neptunian concept ALL IS POSSIBLE; MULTIPLE REALITIES ARE SIMULTANEOUSLY TRUE*]¹⁴

In 1935, Einstein was struggling with the notion that *the act of observation* by a conscious mind “made subatomic particles change from a wave of probable state to an actual point state that was physically measurable. This seemed illogical, suggesting that things simply did not exist if we were not looking at them.”¹⁵ Einstein couldn’t bring himself to believe what he was discovering: that the Moon, for instance, doesn’t exist unless he’s looking at it! Furthermore, this theory led to another peculiar concept known as SUPER-POSITION. Once the wave function is collapsed by the observer observing the particle having certain properties, if any two protons comprising the particle spin off in two different directions, its counterpart – no matter how distant – instantaneously has the same properties. Einstein, in 1905, called this “**spooky action at a distance**”¹⁶ because here was a message that was traveling faster than the speed of light. It was traveling instantaneously (at the speed of thought). [*Neptunian concept NO SPACE, NO TIME*]

Any two objects (particles) in this state, instantaneously identical regardless of distance, are called ENTANGLED. One reacts immediately if something is done to the other, resulting in an earth-shattering implication that “**everything is linked to everything else, and that separateness is an illusion**”¹⁷ [*Neptunian concept ALL IS ONE*] because these two entangled particles, which are relaying messages

instantaneously (faster than the speed of light), are in fact the same object. From the viewpoint of entanglement, once two particles were joined, even if they were split apart, they would forever instantaneously share information regardless of the distance between them. Physicist Richard Feynman suggests that “the whole universe may consist of one electron moving at infinite speed – meaning that the entanglement of any two particles is the natural state of the universe.”¹⁸ [*Neptunian concept ONLY GOD*]

In attempting to break down the smallest bits of matter, it became obvious that there was no ultimate particle other than what behaved as a wave [*Neptunian concept NO THERE, THERE*]; there was no ultimate teeny hard ball of an atom¹⁹; instead, everything that is seen as solid and real was, in effect, an illusion [*Neptunian concept MAYA, THE DREAM DREAMING ITSELF*].

Well, here we have some very fundamental concepts that have in the last century begun to remold our notion of reality. It has taken over one hundred years for this radically new perception of reality to permeate our consciousness. Now we’ve been primed, and are ready. (**Saturn, the Lord of Time, seems to be giving way to Neptune, the Lord of Oceans.**) But thus far, we are looking at only the merest taste of weirdness that quantum physics is unveiling! The era of computers and lasers was just getting underway.

Holograms and Computer Games

Once it was determined that there is only the illusion of solid form built up via directed observation, it was inevitable that the role and function of consciousness must then be examined.

Reality, it was concluded, is built instant upon instant to give the illusion of time and of space, in much the same way as entering a hologram (which we saw in Star Trek’s *holodeck*, or can be likened to a virtual reality computer game). **Reality is in effect a hologram**, a kind of vast “flowing hologram (or *holomovement*)”. [*Neptunian concept THE FLOW*]. It’s a ceaseless process, called ENFOLDMENT – the universe enfolded within itself – “from potential into apparent stability and solidity”²⁰, with subatomic particles constantly dissolving [*Neptunian concept NEPTUNE, PISCES*], then re-forming and re-emerging. [*Neptunian concept THE ONLY DANCE THERE IS*]. These states are called The Explicate Order (outer), a projection from higher dimensions of reality²¹, and the Implicate Order (potential). [*Neptunian concept KABBALAH’S SOURCE, KETER and KINGDOM, MALKUTH*] Everything that we see or know is enfolded upon itself, including human consciousness itself.

Consensus reality is a huge simulation that can be called PHYSICAL MATTER REALITY (PMR); it is as though PMR is similar to a first-person computer game.²² “Until objects are brought into existence by an act of observation, they only exist in potential.” [*Neptunian concept CONSCIOUSNESS CREATES REALITY!*] “What we see, hear and feel is rendered by the program”, explains Peake.²³ What we perceive as reality is a holographically generated illusion.

Continuous flows of energies in the form of subatomic wave frequencies (“wavicles”) that can be collapsed by a conscious choice leads easily to the notion that the mind can create reality by using energy waves that have properties. [*Neptunian concept: ASTROLOGY, VECTORS OF AVAILABLE ENERGY*].

Consensus Reality versus Non-Physical Matter Reality

The primary difference about CONSENSUS REALITY (PMR) is that, once an object has been collapsed, it remains in existence for all other observers too. In PMR, each time the wave is collapsed, it remains in that state, thus allowing us to share a consensus reality (a tree is a tree, a chair is a chair).²⁴

But the external world is internally generated. “The phenomenal world, therefore, is created internally and then projected outward to create the illusion of a real place located in space and time.” As physicist Fred Alan Wolf explains, the brain is a mechanism designed to interpret and form, over and over, through the constant modeling of information from the five senses, the notion of a solid reality, along with the notions of time (duration) and space (location). “Reality as perceived by any observer is only rendered in the direction of attention of that observer. As you turn your head, it pops into existence only to disappear again when you look away.”²⁵

I just shared a Facebook posting of an orange wave (oscillation) against a black background that says, “When you’re not looking, I’m just a waveform.” How perfect! The fact that it’s being shared on Facebook indicates the profound change in mentality that’s subtly occurring in our consensus reality. [*Neptunian concept: JUST ENERGY. MIND CREATES IDENTITY.*]

Within each measurement of time is an observer who observes during this duration.²⁶ There is an observer observing PMR and an observer observing NPMR (Non-Physical Matter Reality). (Early on, when I first awakened into metaphysics, I had a haunting yet enlightening dream: I was trapped in a cave that was filling with the sea, and I was thus about to drown. Then in the midst of this nightmare, a voice telepathically

asked me: *Then who is seeing this happen?* The only answer, I realized, was a Greater Self who was always there, and not dependent on my physical survival.) [*Neptunian concept THE WITNESS.*]

“Consciousness, specifically the act of attention, is what creates both the NPMR of dreams, altered states, and out-of-body-experiences as well as the shared consensus reality of PMR.”²⁷ [*Neptunian concept THE MAGICIAN CARD OF THE TAROT!*].

Terming it the Observer Created Universe, arguments have been made by Professor Stephen Hawking that all universes do not branch off and exist in isolation but exist simultaneously in a state of SUPER-POSITION. “You are creating your own universe as you go along, and so is every other consciousness. This goes for all the people you interact with in a lifetime.” This has been called a MULTIVERSE. “We are all existing in our own personal computer game, in which each decision brings about a different version of reality. But the potential outcome of each decision exists whether or not you choose it.”²⁸ “The two best kept secrets of modern times: either reality is created by consciousness, or there are trillions of universes all containing versions of you and me,” Peake teases.²⁹

What is Reality? Astral Travel, Out of Body, Near Death, and Lucid Dreams

In attempting to pin down the very notion of consciousness – its location, its attributes – science is delving ever deeper into Neptune’s realm. Formal scientific experiments have been conducted to determine if consciousness can truly leave the body, and to validate that by asking the person to return with details of places that were visited. Experiments with out-of-body experiences (also called astral travel), lucid dreaming, and remote viewing, as well as a lot of data coming from individuals who have undergone near-death experiences and reported things in detail, have led scientific research to apply serious consideration to these altered states. [*Neptunian concept ALTERNATE REALITIES, OTHER REALMS, and THE BEYOND*].

Some scientists are terming these various states as *ecsomatic*, wherein the consciousness seems to leave the body, or *intrasomatic*, wherein the consciousness seems to be traveling deeply within the identity.³⁰ Using experiments with, for example, out-of-body experiences, scientists attempted to leave clues in places that could only be seen from the vantage points of places that were outside the range of the physical viewpoint, such as writings that required one to be floating up near the ceiling to be within eyesight. Despite considerable effort, validating reportage was difficult to obtain although certain psychics proved more

adept than others in such matters as remote viewing. However, the scientific position concluded that the out-of-body world (ecsomatic) is created “by the mind for the mind”, and that soul travel is an inner, not outer, journey in which “the subject exists in a universe created by the mind but greater than the mind.” [*Neptunian concept THE PARANORMAL*]

This led researchers to deduce that consensus reality is an externally generated illusion but dreams are as real as consensual reality. Some people argue that the “real world” is a mind-created digital illusion, so an out-of-body is therefore an illusion within an illusion! “Reality may involve an interaction between physical matter reality (PMR) and non-physical matter reality (NPMR)... We therefore are existing within nested illusory realities, where the dream state is one of many.”³¹ [*Neptunian concept DREAMTIME, SHAMANIC JOURNEYS*]. Everything is a hologram, and some holograms are nested within larger holograms.

I had an experience once that drove this home to me. Sitting in a movie theater, watching an action thriller with my husband, I become conscious not only of the noisy film being projected on the screen but of the sense that the entire movie theater, with its walls, seats, floor and ceiling dwindling in linear perspective to a vanishing point, was also part of the projected illusion. This amazing vision then continued as we left the theater, walked towards our car in the parking lot, and drove away down a dark suburban road with our headlights now projecting outwards towards a vanishing point. I felt that this entire experience was a teaching from my guides, emphasizing the point that the personal identity is living within a local holographic illusion.

Further scientific research into consciousness concluded that consciousness exists in the brain, and also does not exist in the brain; it exists everywhere as part of the Implicate Order. This means that consciousness has access to all the information available within this matrix – a matrix known since ancient times as the AKASHA or AKASHIC RECORDS. “Consciousness does not need the physical body to continue existing”; it can exist in a disembodied state (i.e., out of the body); “it does not need a body to function effectively”³²; nor is the brain the location of consciousness. Death is not the end; consciousness continues after death, and in fact continues to evolve through various reincarnations. [*Neptunian concept LIFE AFTER DEATH, CHANNELING, MEDIUMISM*]

The holographic notion can explain telepathy, remote viewing, past life memories, precognition, and possibly even ghosts, because if everything is linked to everything else, then consciousness is not constrained to the

brain but can travel within its own inner space, which in turn contains the whole universe, as holograms do. “Since dreams contain elements of our own future, under some circumstances we can recall these precognitive elements; under *déjà vu* we may have a sudden recognition and dim recollection that this moment has been experienced before.”³³ [Neptunian concept *EXPANDED FIELD WHERE ALL INFORMATION IS AVAILABLE/THE AKASHA, FORETELLING, PROGNOSTICATION, PRESCIENCE.*]

“Evolution of life on this planet indicates that life would eventually become conscious, then self-conscious, then ultimately reflectively self-conscious.” [Neptunian concept *WISDOM.*] The universe is entangled, and consciousness is the creator of matter. British theoretical physicist Roger Penrose has suggested that “the weird and wonderful world of entangled particles and collapsed wave functions all exist for one reason alone: **to facilitate consciousness**, and allow that consciousness to experience a *MACROVERSE* (an infinite number of universes).”³⁴ [Neptunian concept *DIVINE PLAY, WISDOM’S GAME*]

Unlimited Energy: the Zero Point Field, Tesla, the Implicate Order

By measuring the tiniest distance that can possibly exist, physicists reached the conclusion that there is no such thing as empty space or a genuine vacuum. Since atoms are not hard little balls, but are made up mostly “of empty space, consisting of a tiny nucleus with electrons spinning round in a cloud of probabilities”, rather than being empty, “this vast emptiness contains quantum potential”, and all particles are linked by this quantum potential within a huge interconnected web.³⁵ [Neptunian concept *NO SEPARATION*]

By realizing that this “cloud of probabilities” fills all of empty space, including that within us, in our very atoms, rather than calling that place a vacuum it is now named a *PLENUM* – a place that is absolutely full and alive with potential. This energy fills all of space, both inner and outer, and has been named *ZERO POINT ENERGY* – an unlimited source of fuel.³⁶ [Neptunian concept *AIN SOPH, FOUNTAIN OF LIMITLESS LIGHT*].

Nicola Tesla, the pioneering Serbian-American engineering genius and rival of Thomas Edison, whose inventions are only now reaching full appreciation, spoke before he died of an unlimited supply of energy, a way to tap into energy that was available everywhere, not needing other sources such as fossil fuel. But this was a challenging, radical world-view that people weren’t ready for in his time. He died almost penniless.

“The Zero Point Field, the Akasha, is the ground state of everything.”³⁷
Only now is it being recognized as being a field of unlimited energy.

By building the nature of reality instant after instant, consciousness is provided with all the potential possible in which to play. This is called The Implicate Order, and is a limitless reservoir of energy, or light, in which the mind reaching outside the physical body and making observation exists in a field where all energy is available with which to create. Consciousness can play in a field of unlimited possibilities.³⁸
[*Neptunian concept: VISUALIZATION, IMAGINATION, ART*]

Wormholes, Black Holes

The mechanism for filling up this entire field of energy consists of tiny objects of unbelievably tiny distance separation, each one functioning like a black hole, sucking in electromagnetic energy. As it pulls in electromagnetic energy from one end, it thrusts/exudes/pushes light out from its other end which has been called a white hole. Picture a donut shape in which energy constantly gets sucked in and pushed out in the three-dimensional shape known as a torus – a shape that has been seen by many cultures in flattened symbols such as rings upon rings, or flower petals, or spirals. [*Neptunian concept: KARMA, A CLOSED SYSTEM, WHAT GOES AROUND COMES AROUND.*] Physicists have named these infinitesimal bridges/continuums/paths the Einstein-Rosen bridge. An EINSTEIN-ROSEN BRIDGE is a hole linking two areas of time-space – A WORMHOLE.³⁹ [*Neptunian concept: FOUNTAIN OF LIMITLESS LIGHT, AIN SOPH.*]

The light which gets sucked into the black hole and pushed out of the white hole is coherent, like a laser. All of seemingly empty space is filled with these conducting eternal pathways of energy. [*Neptunian concept: SPIRIT*] That is the Zero Point Field. Each wormhole that links two areas of space and time is potentially an Einstein-Rosen bridge.

“Consciousness could access parallel universes by disappearing from this universe and going into another universe through a wormhole.”⁴⁰
[*Neptunian concept: RAINBOW BRIDGE, CONTINUUM, JACOB'S LADDER*]

“When someone has the sensation of leaving their body, they are actually moving into inner, not outer, space.... Deep within your brain is the holographic record of every life that you could possibly live or have lived, and consciousness is pulled inwards to the deepest areas in the brain, and enters an Einstein-Rosen bridge (a wormhole) that allows immediate access to the information contained within the Zero-Point Field (Akasha)... Information is sent instantaneously between different locations within the body. Therefore, the process by which conscious

can acquire information is limitless.”⁴¹ [*Neptunian concept: MIND OF GOD*]

When large numbers of particles cooperate, as Einstein discovered in 1905, it is called QUANTUM COHERENCE, such as with a laser or emanating from a white hole. When information (light) becomes coherent, it actually forms a new, higher type of matter called a BOSE-EINSTEIN CONDENSATE. [*Neptunian concept: ASCENDANCE.*] In this state, information is able to be transferred instantaneously.⁴²

Doesn't this scientific lingo sound metaphysical at this point!?

Neurotransmitters, Microtubules

Looking even more deeply at the human body, using this new understanding of quantum physics, bodily chemicals have been identified which are called NEUROTRANSMITTERS.⁴³ These are the chemicals that induce the same experience as becoming disembodied, dying, traveling back to childhood, or traveling to an alternate world. A certain chemical neurotransmitter, metatonin, is secreted by the pineal gland [*Neptunian concept: THE THIRD EYE*]. The pineal gland in neurochemistry “may indeed be A PORTAL into parallel realities”. It could be in effect a wormhole using an Einstein-Rosen Bridge to project consciousness into alternate universes.⁴⁴ [*Neptunian concept: OTHER DIMENSIONS, BEYOND, PERMEABILITY.*]

Some scientists studying the ways in which these neurotransmitters are working, while recognizing that these inner journeys are not hallucinations or sickness, are beginning to examine if they may be enabling the tiny wormholes to be formed, allowing consciousness to project into alternate universes, or directing energy towards a particle to collapse it and thus build reality. [*Neptunian concept: TRANSMISSION, CONDUIT, MICROCOSM/MACROCOSM, MEDIUMISM.*]

Furthermore, the scientists working on the cellular level of research into the function of neurochemistry in the body have made a big discovery: Within the body's cells are tiny tubular protein structures that are condensates of this coherent light (also called QUANTUM COHERENCE). Science has named these biological condensates MICROTUBULES. Think of the little torus (donut) shape, pouring energy through itself continuously, and forming wormholes. Microtubules, similar to fiber optics, are tubular protein structures. Information that is sent through these microtubules is helped by quantum effects using light as its creative medium. [*Neptune concept: LIMITLESS LIGHT, SOURCE*] It has been suggested that “each micropulse of light generates single photon holograms”.⁴⁵

Two things can be said thus far about microtubules: one is that these tiny structures “create reality by forcing a wave of probabilities into a physical object that has mass and location,” which means that mind really does create matter, and not the opposite way around.

“Neurotransmitters, working on the most minute level, direct energy toward the particle, collapse it, and therefore build reality.” The second is that each micropulse of light generates a hologram made out of photons. “Since there are literally trillions of microtubules in the human body, if each protein structure creates [holograms of light], then the amount of information the human body can store is effectively unlimited.”⁴⁶ [*Neptunian concept MAN AS CO-CREATOR.*]

Unity, One, The Greater Self

So finally science is reaching conclusions, based on physics and neurochemistry, which indicate it is possible that the everyday self and this greater mind can become linked or unified. By synthesizing the structures within the body that create reality out of infinite probabilities and through the use of light, aspects of awareness can coalesce into a single unitary being, which in turn suggests the state that many adepts and spiritually advanced human beings reportedly achieve after many incarnations [*Neptunian concept NIRVANA*].

The mastery of this type of unification occurs when there is deep coherence (synchrony) in the brain [*Neptunian concept SYNCHRONICITY, DEEP MEDIATION.*] For short amounts of time, this process is available to all of us, and is a shortcut to the evolution of all humanity, which, as many scientists are discovering, can be the natural goal of the evolution of conscious and its manifestation in physical form (the human brain). Or, as pioneering consciousness researcher Itzhak Bentov says in *Stalking the Wild Pendulum*, “Existence is a game the Universe plays with itself in order to know itself....The Universe is a learning and teaching ‘machine’ or process. Its purpose is to raise consciousness to higher and higher levels, thereby enabling it to know itself.”

Current Research & Theory

Between the 1920s and now in the 21st Century, scientists are discovering, puzzling over, and struggling with the tantalizing challenges of explaining how the process of creating something out of nothing actually takes place, or if solidity is truly an illusion (as Peake calls it, “a form of a magic trick”). [*Neptunian concept THE MAGICIAN.*] Scientists are discerning ever newer particles, and have built an enormous subatomic particle collider (the Large Hadron Collider at the CERN research center near Geneva) to hunt down the theoretical particle, called the Higgs boson⁴⁷, that would be the infinitesimal treasure

pinpointing where matter and non-matter entwine. This particle has also been called The God Particle, and remains a riddle (for which millions of dollars have been spent in pursuit of its answer).

Further challenges to today's scientific community include string theory, multiverses or parallel universes, anti-matter, expansion or steady state of the universe, and lots of other mind-bending concepts that crop up as each new mystery is solved. The field of physics is alive and exciting today, but in some ways the field of metaphysics is even more exciting because these fundamental changes in our notion of reality are providing a route to the way humans can work with thoughts or understand themselves as co-creators of reality and not helpless pawns but empowered realizers whose new abilities are backed up by very concise science. Science in effect is proving what metaphysics has always proclaimed as truths. Great minds are in service to Neptune in Pisces.

Neptune's New World (Spiritual People, Godlike Abilities)

With Neptune transiting its own sign of Pisces over the next fourteen years, a profound transformation will alter humanity's worldview. It has been my intention to show how the dance of the outer planets during this era is accelerating the evolution of consciousness to the point that there is a merging between the physical world and that which is beyond the physical [*Neptunian concept META-PHYSICS.*]

So now we can consider what to expect, what might happen to society when people's relationship to its structures, such as government, organized religion, and material consumerism, etc., is deeply altered, or when the individual's concept of self and his/her personal ties or roles is profoundly shifted. [*Neptunian concept THE SHIFT.*] Not to mention what will happen when people understand their revamped purpose on the planet... their newly perceived role as "reflectively self-conscious" beings. When, in other words, there is a general understanding that the mind is the source of reality. Undoubtedly, this is the birth of the more spiritual human, who can work with possibility...The New Human. [*Neptunian concept AGE OF AQUARIUS, HUMAN AS GODLIKE.*]

"The universe is a garden which is extremely good at growing consciousness. The only point of an 'I' is relationship. There's no point in an 'I' unless there are other 'I's around to whom I can give of mine." - Charles Foster, Wired for God? (Fortean Times, June 2012)

From earliest history, development of an intelligent, aware human has gone through cycles, and these cycles were very dependent on structures under which the human had to live (and of course, which the human had created). In the course of its evolution, some of these structures were

repressive, fear-based, or geared towards the benefit of the elite rather than of the individual. In recent centuries, profound changes occurred as civilizations shook off many of its oppressors and developed culture, art, philosophy, psychology, and the route to self-realization. Think what happened to the mass consciousness when psychology gained its footing! What type of sea change will occur when people begin to understand reality in a new way, supported by the findings of quantum physics and other sciences? To realize that the mind is the *source* of reality, to find meaning and comfort in experiences that are very real but odd, such as OOBes, NDEs or lucid dreams. How will global mind react when it's understood that these psychic journeys do not take place outside of our physical bodies (since that really doesn't exist) but inwardly – into alternate universes, or a slightly different structuring of the personal reality (i.e., journeys into consciousness)? When we are all led to the realization that the world exists only in thoughts, only as probability waves, or as consensus reality, then it becomes perfectly logical, and do-able, and in fact fully scientific to understand that our intentions, our visualizations, our choices, and our beliefs are exactly what can create a new world. [*Neptunian concept UTOPIA*] There can be no more victimhood, for each creates one's own reality.

Neptune in Pisces can allow for an emphasis on water and oceans – cleaning them up, appreciating them, and cherishing our clean water. Neptune in Pisces can alter belief systems in the direction of more inner connection, with priests or shamans functioning as guides rather than gatekeepers – guides who facilitate and enable the utilization of non-physical matter reality (NPMR), the creative and imaginative visualization of better results. Neptune in Pisces can conceive of more effective ways to use drugs or medication to anesthetize, and deal with vague, chronic pain, anxiety, insomnia, and even poisoning. Neptune in Pisces means that a portal opens – a portal towards the spiritual and inspirational, in which the soul's natural tendencies to be telepathic and intuitive bring forth a more spiritually aware and less materialistic version of the human being.

Contemplating The Eye on top of the pyramid in the Great Seal of the United States, we're reminded of the theme that America is meant to be the platform for the new human through placing trust in God. The resurrection (Eagle, Phoenix) and completion of the edifice of the eternal structure of government of the people, by the people, for the people, only occurs by realizing that it is none other than the individual, aligned with the higher wisdom, who will create the preferred reality (Age Of Aquarius, Man As God).

A large snag to this in the current and revolutionary age (Uranus square Pluto), is because we face the dilemma of very different desires for the

building of reality within one country. That will have to be resolved in the course of human development. But meanwhile, we'll be given great assistance by the stars and planets, by the cosmic design, as we come into a long-lasting era in which Neptune, Pluto, Saturn, and even Jupiter participate in a kite formation with the U.S. chart, and allow the citizens to figure out the game of creating an ideal society, and a tolerant and compassionate people. Quantum physics, supported by all metaphysics, tells us it is so.

For those who would like to learn how to fast-track to an interior wisdom place of empowerment and oneness, I've created an installment subscription program on my blog, www.WisdomsBlog.com. Much of the information is free, posted on the blog as The Wisdom System™ Level One, after which installments can be purchased in three continuing levels, @ \$19.95 each, to be emailed to the subscriber automatically over ensuing weeks. For consultations (by appointment only), email Judi@WisdomPath.com; for books (including the award-winning *Wisdom's Game*) and other products, please visit <http://wisdompath.com/store.shtml>. Special Report, "HOW TO ACTIVATE YOUR PSYCHIC ABILITIES: 12 GIFTS, 10 TIPS", only \$19.95 in Wisdom Path's Store, or \$9.95 downloadable. Also available, downloadable free Special Report, "THE THREE BIG QUESTIONS" – The Brotherhood of Light Workers guidance about life's major questions, upon request. *CONSULTATIONS BY APPOINTMENT, CREDIT CARDS ACCEPTED, CALL 302-697-3630 Eastern Time business hours.*
